

DataEditor saves you time

so that you can focus on your analysis with confidence instead of losing time manually remediating its underlying data

DataEditor is DataPlait's proprietary data-manipulation software. Its emphasis is on rapidly reorganising and editing data in preparation for analysis and master-data management. It also enables users to instantly create analytically-enabled apps within Excel.

Easily manipulate your data

You can now rapidly edit and reorganise your data on-the-fly and in batches – thanks to DataEditor. It all happens within the familiar environment of Microsoft Excel through a powerful add-in. Business users and analysts can selectively isolate and manipulate their data in chunks. This is a very efficient and productive approach to correct, edit and reorganise data for desktop analyses.

40% of business initiatives fail to meet their objectives due to poor data quality - Gartner

Gone are the days of scrolling through spreadsheets and manually remediating data for analysis. Business users can quickly harmonize, validate, re-orientate, select and disaggregate their data. Powerful features provide added leverage without the need to write update-queries or manually isolate records for editing. Data is easily manipulated while reviewing analyses, bringing increased confidence in the accuracy of the results – at speed.

This powerful tool is suitable for virtually any type of desktop analysis in a business setting (up to a million records at a time). Finance, Audit, Marketing, Procurement, HR and other departments are

becoming ever-increasingly analytically driven in their decision making. It's important to have sound underlying data to draw sound conclusions. Our software can drastically reduce the trade-off between time constraints and information accuracy.

Instantly create your own apps for your analyses

Evolving analytical needs and the continually broadening availability of data require evolving applications (or ERP-system modules) to make sense of it and to take advantage of it for better business decision making. We've made it super simple to instantly create your own fit-for-new-purpose apps within Excel. No coding is required – just leverage our processing engine and powerful features to turn a spreadsheet into a productive app with all of the analytical capabilities of Excel. These context-specific apps and their underlying data

Big data, small data, internal, external, experimental, observational — everywhere we look, information is being captured, quantified, and used to make business decisions.. - Harvard Business

are easily shared and can be adapted further within teams and across the organisation. As a business user or business analyst, you can quickly create new and temporary solutions to meet specific informational needs. You can also create virtual systems with your apps in a fraction of typical development times. No databases are needed. We'll share our templates with you to get you off to a fast start. You're enabled to bring faster insights to situations and boost productivity at a much lower cost – just do it.

Update the Master Data

You can also post corrections to master data, whether it's a chart of accounts, a catalogue or any other master table, in a controlled, reversible and auditable manner. Doing this can apply any corrections which you make or recommend to databases for the benefit of your colleagues across the organisation.

Master-data managers can also easily regroup and subgroup master-data items for better reporting and other purposes. Item descriptions are quickly refined and classified. ERP-system and database master-tables can be instantly updated in situ. Changes can be tracked and simply rolled back if necessary.

Hard-to-use business intelligence (BI) tools, lack of business user skills, lack of IT support, data security and access, and data quality impede self-service BI -
BARC

Legacy IT structures may hinder new types of analysis and managing unstructured data often remains beyond traditional IT capabilities. Fully resolving these issues often takes years. - McKinsey

You're IT

DataEditor can quickly enable you to proactively solve your information needs in this data-driven era.

Boost your analytical ability, data competency and productivity, easily.

There's a complimentary one-year license on offer to every corporate (Ts & Cs apply) so contact us for a demonstration and get started.
